Continuation of Disposition of Claims: Claims subject to restriction and/or election requirement are 1,4,6-12,14-23,29-35,37,39,45-48 and 50-56.

DETAILED ACTION

Page 2

Claims 1, 4, 6-12, 14-23, 29-35, 37, 39, 45-48, 50-56 are pending and under consideration.

Pg 3, line 32, through pg 4, line 6, disclose various fragments of the mouse sship promoter of SEQ ID NO: 1 ranging from an 11.5 kb-GFP construct to a 44 nucleotide fragment.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, 4, 6-12, 14-23, 29-35, 37, 39, drawn to a nucleic acid sequence comprising an s-ship promoter, vectors comprising the promoter and cells comprising the vector.

Group II, claim(s) 45-48, drawn to a mammal comprising an s-ship promoter.

Group III, claim(s) 50, drawn to a method of screening a substance by contacting a nucleic acid comprising an s-ship promoter with an s-ship promoter binding protein and the substance.

Group IV, claim(s) 50, drawn to a method of screening a substance by contacting a cell comprising an s-ship promoter with the substance operably linked to a reporter gene.

Group V, claim(s) 51-54, drawn to a method of identifying stem cells by administering a nucleic acid sequence comprising an s-ship promoter operably linked to a reporter gene to a population of cells.

Group VI, claim(s) 55-56, drawn to a method of screening for a modulator of cell function by transfecting stem or hematopoietic cells with a vector comprising an s-ship promoter operably linked to a nucleic acid sequence encoding a candidate modulator.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the s-ship promoters of Group I are not required for the mammals having cells comprising an s-ship transgenic sequence in Group II, and vice versa. Therefore, the inventions do not share a special technical feature.

Page 3

This application contains claims directed to the following patentably distinct species: pg 3, line 32, through pg 4, line 6, disclose various fragments of the mouse s-ship promoter of SEQ ID NO: 1 ranging from an 11.5 kb-GFP construct to a 44 nucleotide fragment. The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species. In addition, these species are not obvious variants of each other based on the current record.

Applicant is required under 35 U.S.C. 121 to elect one of the single disclosed species described in the paragraph bridging pg 3-4 for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, all the claims are generic.

There is an examination and search burden for these patentably distinct species due to their nature and the ability to search multiple sequences in the same application. The species require a different search (employing different search queries); and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Application/Control Number: 10/593,202 Page 4

Art Unit: 1632

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wilson who can normally be reached at the office on Monday, Tuesday, Thursday and Friday from 9:30 am to 6:00 pm at 571-272-0738.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.
